Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/781,473

Applicant(s)

RADKOWSKI ET AL.

Examiner

Arun S. Chhabra

Art Unit

3764

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 17 February 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-10 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-10 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 18 February 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This action is in response to applicant's amendment received on February 17, 2006.

After reviewing Applicant's arguments, an updated search was done and a new non-final rejection has been made.

Claim Objections

Claim 1 is objected to because of the following informalities: There are two periods instead of one at the end of claim 1 leading one to believe it could be and ellipsis which would not be proper claim format. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2 and 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith (US Patent Number 6,270,448) in view of Albergo (US Patent Number 5,536,229).

Smith discloses a leg stretch exercising device with an elongate support member 14 having upper and lower free extents and through which a longitudinal axis passes. Smith also discloses a truss member 22 that supports the lower extent of the longitudinal body in an upright position via a tripod configuration.

The leg stretch exercising device also has multiple cross members 72 and 56 which are attached at the upper part of the support member and disposed in a cantilever fashion, preventing their rotation. The cross members have limb support portions, 78 and 60 respectively, which have a curvature that a user's limb can be supported on. The limb support portion of cross members 72 and 56 are both integral with their respective cross members and the cross member 72 is integral with a cross bar clamp 73 that fastens the cross bar to the support member.

In regards to claim 4, the legs of Smith are connected to a connector 30 that seems to be slidable relative to the elongate support member, considering the fact that Smith discloses a collapsible apparatus. However, even though Smith does not disclose explicitly that the connector can slide relative to the support member, it is commonly known in the art to use slidable leg connectors when collapsing the legs of an apparatus. Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the leg stretch apparatus as taught by Smith, with a slidable leg connector since it was known in the art that slidable leg connectors are commonly used to provide a means by which a tripod can collapse.

Thus, Smith discloses the claimed invention except for the one or more intussusceptible portions. Albergo teaches that it is known to use one or more intussusceptible portions as set forth in column 3, lines 27-50 to provide height adjustment of the apparatus. In addition, a clamping member 20 is used to tighten and loosen the portions so that they can be adjusted. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the leg

Art Unit: 3764

stretch apparatus as taught by Smith, with intussusceptible portions as taught by Albergo, since such a modification would provide the leg stretch apparatus with intussusceptible portions for adjusting the height of the apparatus.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Smith in view of Albergo as applied to claims 1 and 2 above, and further in view of Johnston (US Patent Number 2,469,301).

Smith and Albergo disclose the claimed invention except for the rotatable handle. Johnston teaches that it is known to use a rotatable handle as set forth in column 1, lines 40-60 to engage and disengage a height adjustment portion to prevent or not prevent it from moving. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the stretching exercise device as taught by Albergo, with a rotatable handle as taught by Johnston, since such a modification would provide the stretching exercise device with a rotatable handle to engage or disengage a height adjustment apparatus and thus either prevent it from movement or allow it to move.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Smith in view of Albergo as applied to claim 1 above, and further in view of Jeneve et al. (US 2005/0101453).

Smith and Albergo disclose the claimed invention except for the limb support portion being slidable. Jeneve teaches that it is known to use a slidable limb support portion as set forth in Figure 1 to provide different locations from which a user can support their limb on. It would have been obvious to one having ordinary skill in the art

at the time the invention was made to modify the leg stretch apparatus as taught by Smith, with a slidable limb support portion as taught by Jeneve, since such a modification would provide the leg stretch apparatus with a slidable limb support portion for allowing a user to engage the apparatus from a variety of different locations.

Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith in view of Albergo as applied to claim 1 above, and further in view of Tarulli et al. (US Patent Number 6,343,998).

Smith and Albergo disclose the claimed invention except for the horizontal telescoping members. Tarulli teaches that it is known to use horizontal telescoping segments as set forth in column 3, lines 25-50 to increase the horizontal length of the apparatus. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the leg stretch exercise apparatus as taught by Smith, with horizontal telescoping members as taught by Tarulli, since such a modification would provide the leg stretch apparatus with horizontal telescoping members for allowing the horizontal length of the apparatus to be adjusted.

In regards to claim 9, Tarulli discloses the modification to the invention of Smith except for the clamping member to lock the telescoping members in place. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the horizontal telescoping members as taught by Tarulli, with clamping members since it was known in the art that clamping members are used to tighten and loosen telescoping members. Additionally, since Applicant has disclosed that clamping members are used to lock or release the longitudinal telescoping members it would be

Art Unit: 3764

obvious to apply a similar method of locking or releasing horizontal telescoping members and since there was a known reference (US 5,536,229) which showed that a clamp for longitudinal telescoping members are known in the art, then the same reference can be used to reject claim 9 on the basis that a similar clamping member can be used to lock or release horizontal telescoping members.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Smith in view of Albergo as applied to claim 1 above and further in view of McLeon (US Patent Number 5,518,476).

Smith and Albergo disclose the claimed invention except for the visual or tactile indicia. McLeon teaches that it is known to use such indicia on an exercise apparatus as set forth in column 10, lines 5-64 to allow the user to manually adjust settings and to give the user feedback during the use of the apparatus. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the leg stretch apparatus as taught by Smith, to have indicia as taught by McLeon, since such a modification would provide the leg stretch apparatus with visual or tactile indicia for giving the user feedback during their use of the apparatus and for allowing the user to change settings of the apparatus.

Response to Arguments

Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's arguments, filed 2/13/2006, with respect to the rejection(s) of claim(s) 1-10 have been fully considered and are persuasive. Therefore, the rejection has been

Art Unit: 3764

withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Smith and Albergo.

Conclusion

Specific attention should also be paid to Tarulli (US 6,343,998) in the rejection of claim 4 under 35 U.S.C. 103(a). Taking a close look at column 3, lines 1-13, Tarulli also discloses a leg connector which is slidable with respect to a lower part of the support member. Thus the leg connector can slide up the support member when retractibility of the apparatus is required, reading on the limitations of claim 4.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun S. Chhabra whose telephone number is 571-272-7330. The examiner can normally be reached on M-F 9:30-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory Huson can be reached on 571-272-4887. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
